EDUCATION

University of Agriculture

Bachelor of Science in Software Engineering, Minor in CS

Faisalabad, PK

Aug. 2021 – May 2025

Superior Group of College's

Intermediate with Non-Medical

Faisalabad, PK

Apr. 2019 – Apr. 2021

EXPERIENCE

Flutter / FlutterFlow Developer

Sovanza Inc, Lahore

- Developed scalable mobile applications using Flutter and FlutterFlow with responsive, cross-platform UI and optimized performance.
- Integrated Firebase backend services including Authentication, Firestore, Cloud Functions, and FCM for real-time data and notifications.
- Built workflow automations using n8n and prototyped features via Bubble.io / FlutterFlow to accelerate development cycles.
- Handled third-party API integrations, performance optimization, and CI/CD pipelines for production-ready deployment.

PROJECTS

AI Workflow Automation (RPA Solutions) | *UiPath, Microsoft Power Automate, Automation Anywhere*

- Designed and deployed robotic process automation (RPA) workflows to automate repetitive business processes including data extraction, email automation, and report generation.
- Built end-to-end automation using UiPath Studio with conditional flows, exception handling, and logging mechanisms.
- Integrated Microsoft Power Automate for cloud-based workflows including SharePoint, Outlook, and Excel automation.
- Reduced manual effort by automating task pipelines and improving operational efficiency.

Pharmacy Management Website | *ASP.NET Core MVC, C, SQL Server*

- Developed a full-stack pharmacy management system using ASP.NET Core MVC with C backend architecture.
- Implemented product inventory management, prescription handling, order processing, and secure authentication system.
- Designed relational database schema in SQL Server with optimized queries and role-based access control (Admin, Staff).
- Built responsive frontend using Razor Views, Bootstrap, and integrated RESTful APIs for dynamic data handling.

School Management App | *Flutter, GetX, Firebase Auth, Firestore, Cloud Functions, FCM, Geolocator*

- Built a teacher-only geo-fenced attendance system to prevent proxy attendance and ensure on-premise verification.
- Implemented location validation (150 m) using Geolocator + Haversine logic, blocking attendance outside school premises.
- Enforced one-device-per-teacher binding and once-per-day immutable attendance with Firestore security rules and Cloud Functions.
- Designed admin-controlled workflows for teacher management, leave approvals, reports, and attendance insights.
- Developed clean UI with light/dark themes optimized for non-technical staff.

E-Commerce Mobile Application | *Flutter, Firebase, Node.js*

- Developed full-featured e-commerce app with product catalog, cart, checkout, and order management.
- Integrated payment gateway APIs with server-side validation in Node.js to prevent tampered transactions.
- Built REST APIs for orders, users, and products with secure authentication and structured data handling.

- Automated build and deployment workflows using GitHub CI/CD pipelines.

Islamic App (Al-Quran) | *Flutter, REST APIs, Firebase*

- Developed feature-rich Quran app with premium UI, multi-language translations (Arabic, Urdu, English, Turkish), and bookmarking.
- Integrated audio recitation with playback controls and Bluetooth device support.
- Implemented Qibla direction functionality using device sensors and location services.
- Optimized performance via offline caching and efficient API usage.

Tourist Mobile App (The Journey Loop) | *Flutter, Firebase, Google Maps API, Geolocation*

- Developed tourism guide app with interactive map navigation, place recommendations, and geolocation services.
- Integrated Google Maps API for dynamic routing, place markers, and real-time location tracking.
- Built Firebase backend for content updates, user data sync, and scalable data delivery.
- Optimized app performance with efficient API communication and responsive UI.

TECHNICAL SKILLS

Languages: Dart, C, JavaScript, SQL, HTML5, CSS3, PHP

Frameworks / Libraries: Flutter, FlutterFlow,GetX, .NET (ASP.NET Core MVC)

Backend / Cloud: Firebase (Auth, Firestore, Cloud Functions, FCM, Storage), Google Cloud Platform

RPA / AI Automation: UiPath, Microsoft Power Automate, Automation Anywhere

Tools: Git, GitHub, CI/CD, VS Code, Visual Studio, Postman

No-Code / Automation: FlutterFlow, Bubble.io, n8n

Concepts: Agile Development, REST API Integration, State Management, Role-Based Access Control, Workflow Automation
